

The PIVOT FLUSHER is a new product from L&V Innovations, LLC, the same company that brought you the PIVOT RX.

The PIVOT FLUSHER is an automatic drain for your circle irrigation pivot that allows you to maintain cleanliness as it flushes sediment out the end of your pivot automatically every time the machine is pressurized. Also, this product can eliminate the use of a wasteful end gun for the purpose of getting rid of sand.

Easy installations at the end sediment drain plug, makes the PIVOT FLUSHER a great, low cost, way to maintain the longevity of your pivot, while minimizing plugging caused by excessive sand and trash.

How it works.....

The PIVOT FLUSHER operates using water pressure. The PIVOT FLUSHER allows sediment to flow out while the pivot is pressurizing. Once the pivot reaches maximum pressure, the PIVOT FLUSHER will delay engagement to allow sediment to pass at high pressure for a thorough flush. As soon as your pivot stops and its pressure backs off, the PIVOT FLUSHER will disengage to perform another flush of your irrigation system.
