

PIVOT FLUSHER

The Pivot Flusher from L & V Innovations removes sand and sediment (up to ¼ " diameter) from any standard pressure center irrigation system. With the start of each irrigation cycle, the flusher is activated using water pressure. It will flush your system for a few seconds and slowly close so your system can operate normally. When the cycle is complete, the Pivot Flusher resets, so it can begin the next flush.

- Works off water pressure
- Easy Installation
- Clears Sand and Sediment from all irrigation systems with a minimum 15 psi of water (at the end gun).
- Fits all 2" drain plugs.

Ease of installation, low cost and convenience of use make the Pivot Flusher indispensable on any farm with sand and sediment issues.

INSTALLATION OF THE PIVOT FLUSHER

- Remove the 2” drain plug from the end of your center pivot irrigation system.
- Turn on the water to your irrigation system, to perform a one-time system pre-flush.
- In place of the drain plug, install your new Pivot Flusher.
- Run your irrigation system normally.

BRINGING INNOVATIONS TO AGRICULTURE

L & V Innovations is continuously searching for ways to innovate the agricultural industry. Working in the agricultural industry has provided us with the knowledge needed to produce products that will not only save the farmer time, but also money. L & V products are designed, machined, and assembled in the USA. The Pivot Flusher is just one of these products.
